Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

Output Format

First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>
#include <stdlib.h>
int findFloor(int arr[], int n, int x) {
    int low = 0;
    int high = n - 1;
    int floor_val = -1;
    while (low <= high) {
        int mid = low + (high - low) / 2;

        if (arr[mid] <= x) {
            floor_val = arr[mid];
            low = mid + 1;
        } else {
            high = mid - 1;
        }
    }

    return floor_val;
}

int main() {
    int n;

    if (scanf("%d", &n) != 1) {
        return 0;
    }

    int *arr = (int *)malloc(n * sizeof(int));
    if (arr == NULL) {
        return 1;
    }
   for (int i = 0; i < n; i++) {
        scanf("%d", &arr[i]);
    }

    int x;
    scanf("%d", &x);

    int result = findFloor(arr, n, x);
    printf("%d\n", result);

    free(arr);

    return 0;
}
```

	Input	Expected	Got	
✔	6 1 2 8 10 12 19 5	2	2	✔
✔	5 10 22 85 108 129 100	85	85	✔
✔	7 3 5 7 9 11 13 15 10	9	9	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.
